PROJECTS

[05/12/2023 – 01/02/2024]
Blogging Website Management System
Blogging Website Management System was a back-end project for a blogging website which consisted of the development of API and the Database for the website. For the development of Api's Springboot was used and to create the database MySQL was used. This web—based application comprises three schemas: Blog Module, User Module and Comments/Likes Module. The function of the Blog Module is to add. update, delete and retrieve the data of the blogs available in the store, User Module is used to add users on the website, which user want to read, like and comment in the blog. Comment/like module is used for the user to add their comments and like the blogs.

[01/01/2023 – 01/05/2023]
Driver Drowsiness Detection System
Driver Drowsiness Detection System was a final year major project. The project was made using Python and it's libraries such as OpenCV, Tkinkter and matplotlib. The project used the face detection system with the help of OpenCV library of python using which the Eye-Aspect ratio was generated which then calculated the ratio of eyes, whether they are open or close while the person is driving the car. There were datasets which were already present to crosscheck the calculation and then give the alerts to the user.

HONOURS AND AWARDS

[19/10/2014] Uttar Pradesh Government
